

## **CHIME** telescope: infrastructure and technology

CHIME is a highly sensitive radio telescope which collects very faint radio signals that arrive from space. It is a novel instrument with no moving parts that does not look or operate like most other radio telescopes.

CHIME is composed of four

## **CHIME Team**

The CHIME team consists of researchers from across Canada and the United States:

- J. Richard Bond, University of Toronto
- Paul Demorest, National Radio Astronomy Observatory
- Matt Dobbs, McGill University
- Bryan Gaensler, University of Toronto
- Mark Halpern, University of British Columbia
- David Hanna, McGill University
- · Gary Hinshaw, University of British Columbia
- Vicky Kaspi, McGill University
- Tom Landecker, National Research Council of Canada
- Ue-Li Pen, University of Toronto
